

CLARITY AFTER CRISIS

Critical care physician guidance after hospitalization, ICU care, discharge, or rehab transition.

BridgeCare Medicine helps families understand the medical story, active problems, medication changes, and questions to bring back to the treating team.

Who refers	Elder-law attorneys, geriatric care managers, home-care agencies, private duty nursing, private primary-care practices, and families navigating serious illness.
Best fit	Non-urgent questions after ICU care, hospital discharge, SNF/rehab transition, goals-of-care conversations, confusing medication changes, or unclear prognosis discussions.
Output	A concise timeline, active problem map, medication-change explanation, and practical question list for the treating clinicians.

When this helps

- A family has discharge paperwork and medication changes but still does not understand what happened.
- A loved one is moving from hospital to SNF, rehab, assisted living, or home and the plan feels unclear.
- The family is preparing for a prognosis, code-status, hospice, feeding tube, dialysis, or escalation conversation.
- Multiple clinicians gave updates, but nobody has put the full picture together for the family.

Launch pricing

Focused Review	30 minutes	\$295
Full Advisory Visit	60 minutes	\$650
Ongoing Advisory	30 days / three touchpoints	\$1,200

Not emergency care. Advisory support only. BridgeCare does not replace the treating physician, manage urgent situations, or collect clinical records through ordinary email.
