

REFERRAL PARTNER ONE-PAGER

A safer medical-advisory handoff for overwhelmed families.

BridgeCare helps families understand the medical story before the next conversation with the hospital, rehab/SNF, facility, home-care, or treating team.

WHO SHOULD USE THIS

For social workers, discharge planners, SNF/rehab teams, elder-law attorneys, care managers, and home-care partners who meet families stuck between medical complexity and next-step decisions.

Social workers

When a family needs physician-level interpretation before a discharge, meeting, or next call.

Discharge planners

When questions about rehab/SNF, home care, follow-up, or medications are slowing clarity.

SNF/rehab teams

When families need help understanding the hospital course and what to ask the treating team.

Attorneys/care managers

When planning, placement, hospice, or family conflict is harder because the medical story is unclear.

REFERRAL-SAFE WORKFLOW

No records by ordinary email.

No-PHI fit screen

Right-service check

Paid booking if appropriate

Secure intake

Advisory visit

Good referral fit

- Hospital, ICU, discharge, rehab/SNF, or home-care transition feels confusing.
- Family needs plain-language preparation before a care-team conversation.
- Medication changes, follow-up, hospice, or goals-of-care conversations need clearer questions.

Not a fit for

- Emergency care, urgent triage, or same-day clinical decisions.
- Diagnosis, prescribing, direct treatment, or legal/insurance advice.
- Replacing the treating physician, hospital, facility, or care team.

Simple language to share

BridgeCare Medicine may help your family understand the hospital or rehab story, organize questions, and prepare for the next conversation with the treating team. Please use the no-PHI fit screen first and do not send medical records or private health details by ordinary email.

Refer families to the no-PHI fit screen.

BridgeCare confirms fit before paid booking or secure intake. Records are handled only through secure intake when appropriate.
